Flatbed Load Covering Specialist

ALCS

SIDE CURTAIN SYSTEMS

ALCS is the perfect load covering solution when requiring van protection combined with flatbed versatility. This hard top, soft sided curtain system was designed for easy side and rear load access. Perfect for building, construction and lumber products ALCS guarantees cargo can be off loaded regardless of side shiffling. Gain access to one side at a time providing weather protection to the rest of the load.

side Kits
For Flatbed Requirements

Side Kits remain the most economical load covering solution in the industry. This modular post, panel, bow and tarp system allows any flat deck trailer or truck body to be quickly converted into a load covering system and then back into a flatbed. Available in 2ft

– 8ft heights with heavy duty or Lite weight panels, Side Kits are built for load versatility.

Boxes: Single & Dual Doors

Aerodynamics
for Flatbed Trailers

- Reduce Wind Drag ☒
- Greater Handling & Stability ☒
- Increase Fuel Economy ☒

FUEL SAVINGS

By improving aerodynamic efficiency Airtab equipped vehicles require less power and as a result less fuel to travel at the same speed.

GREATER STABILITY

Less turbulent air behind a vehicle means the vehicle becomes more stable on the road and less reactive to gusting winds and weather.

STAY CLEANER LONGER

Changing the way air and water behave with Airtab helps keep the rear of the vehicle cleaner longer.

Digital Print Advertising

Over the Road advertising is the highest exposure a company can benefit from when promoting their products & services. At LCS we have identified the specialized requirement to digitally print graphics on soft side load covering systems. We welcome the opportunity to quote on future new designs for any re-covering of your present tarp systems as well as adding to any new system requirements.
