

- Covers like a Van Trailer
- Loads like a Flatbed Trailer
- Tight Loads that shift will always come off the side easily
- **Recommended for all Building Products**

Perfect for Trailers, Truck Bodies, B-Trains, Drop Decks

Features / Advantages / Benefits:

The ALCS® Side Curtain system provides a Load Covering Solution for a variety of industries ranging from diversified building products to general cargo. Resembling a van trailer, our curtain system provides the side loading versatility of a flatbed trailer allowing transportation companies to maximize their equipment while consolidating their fleets.

Super Structure:

The ALCS® roof design consists of our own unique captive self-supporting aluminum extruded combination top rail and track. Unlike other competing designs where a steel supporting top rail structure is required, the roof design is lighter and structurally adequate up to 53ft long. Aluminum or Galvanized roof bows supporting a 0.40 aluminum roof skin are located on 24" centers with a 1" radius chamber to ensure proper water runoff.

All roofs are supported with easy to remove break-away posts typically located on 12ft-16ft centers. Optional rolling posts allow the operator to simply move the post from its support position to an alternate location while loading or unloading the system, eliminating potential loss.

Tensioning your Side Curtain to give the hard-side appearance of a van trailer is done easily with a heavy duty high powered front tensioning mechanism. Our added enhanced rear Quick Release mechanism allows easy access to the rear of the side curtain without having to release the front tensioning mechanism.

Front Bulkheads and Rear Doors come standard with white FRP panels. Our system offers optional panel selection ranging from black FRP to Mirror Finish Stainless, or Mirror Finish Waffle Stamped Stainless.

Structural Curtains:

ALCS® Curtains are manufactured utilizing state of the art welding technology. All curtains are constructed from 26.5 to 28oz high gloss urethane tension PVC fabrics. 2" PVC vinyl coated load bearing cargo straps are fully welded to the vertical and horizontal interiors on 24" centers. **You can always recognize our Curtain system from its smooth hard side like appearance.**

Our Curtains are standard with stainless steel buckles and ball bearing rollers.

Corporate Advertising:

ALCS® Side Curtains are not just a Load Covering Device, but rather your company's strongest advertising tool. Billboard advertising over the road is the fastest growing method of getting your corporate message out to the public cost effectively. (Compare it to any other advertising method you presently use.)
